Feeding Directions

- Feed free choice to non-breeding, mature, fully-feathered birds.
- Adult birds should eat approximately ¼ cup (17 g) per lb (0.45 kg) of body weight daily, but amounts will vary based on species, size, and activity level.
- Scatter food directly on the water, where it will float, or it may be fed in a long, shallow trough of water, which will prevent the food from floating away from the birds.
- It is always good practice to wash hands thoroughly after feeding and/or handling pets.
- This diet is not for human consumption.

Storage Conditions

Store in a cool (75°F or colder), dry (approximately 50% RH), well-ventilated location, free of pests and insects. Do not offer moldy or insect-infested feed to animals as performance loss, illness or death can occur. For best results, store contents of open paper bag in container with sealing lid or reseal the package between uses. Freezing will not harm the diet and may extend freshness.
